

Framery One & Framery Connect Bookable Pods

Decrease the amount of 1-person phone calls happening on meeting rooms by integrating your *Framery Ones* as bookable resources on your existing calendar system.

Enhance the *ad-hoc usage experience of pods* as the *Framery One* shows the calendar status via the control panel, and creates automatic reservation to it when someone enters the pod.

Get real-time status of currently available meeting pods to your existing calendar system!

framery

Framery One can be integrated with your *Microsoft Office 365* and *Google Workspace* calendar systems.

Bookable pods: reserve a pod in advance

In *Framery Connect* you can pair your pod with a **calendar resource** in your existing Google Workspace/Microsoft 365 system.

This will mirror the reservation situation of that calendar resource to the screen of the pod, and will allow booking of the pod for meetings beforehand.

The person doing the booking can be ensured that they will have a sound-proofed reserved just for them for their important call - and if there is someone at the pod before that, they will be told to leave before the booking starts.

The image shows a calendar application interface. At the top, there is a navigation bar with a menu icon, a date selector showing '13' in a blue box, the word 'Calendar', a 'Today' button, and navigation arrows. The main content area is divided into three sections: a 'Create' button, a calendar grid for January 2022, and a 'Meet with...' section. The calendar grid shows the date '13' highlighted in a blue circle. The 'Meet with...' section shows a meeting titled 'Elizabeth P., 12:00, Framery' with a red border. To the right, a mobile device screen displays the 'Kitchen Pod' interface, showing the date '3.8.2020' and the meeting details '12:10 Elizabeth P.' with a green border.

Bookable pods: Automatic Reservation

Bookable Pods does not prevent ad-hoc usage of the pods. Instead it enhances that experience.

When someone enters a pod connected to calendar, *Framery Connect* will automatically create a booking to the calendar so the person can be sure that no-one will reserve the pod while they are there. Reservation is extended automatically as long as the user stays in the pod.

If there is an upcoming calendar reservation for that pod, the current user of the pod will be informed that how long they can work interrupted before they must leave.

The image shows a mobile application interface for a calendar and pod reservation system. The main screen displays a calendar for January 2022, with the 13th highlighted. A 'Create' button is visible. Below the calendar, there is a 'Meet with...' section with a card for 'Framery HQ-2-One, Ne...'. To the right, a detailed view of the 13th shows a timeline from 10:00 to 17:00. A reservation is shown from 12:30 to 13:00, labeled 'Reserved, 12:30, Framery Elizabeth P., 13:00, Framery'. On the far right, a 'Kitchen Pod' interface is shown, displaying the date '3.8.2020' and a reservation for 'Elizabeth P.' at 12:10. The pod interface includes control buttons for light, camera, and audio.
